

# Electric Grid Flykillers

## Market leading high quality flykiller

As the biggest selling range of quality electronic flykillers in Europe, **Exocutor™** is ideal for any application where a high quality electronic flykiller is required at a competitive price. Incorporating high specification components and build quality, **Exocutor™** is available as a 6, 16, 30 or 40W unit in either white or stainless steel construction.

EX16 White

EX30 White

The new Viper™ II range has been designed and built to the highest standards and all units carry international safety certification.

All models are fitted with two 15 Watt UVA lamps, which ensure optimum attraction to flying insects. Once attracted to the unit the insect is hygienically and securely electrocuted and safely collected in the deep catch tray.

New Viper™ II has been made easier to service, can be either wall mounted, ceiling suspended or free standing and is available as a HV Killer or Catcher unit with an IEC or \*Hard wired connection upon request.

## Features

### High efficacy Synergetic UV tubes

Patented technology with dual wavelength for an increased catch

### High performance killing grid

Removable killing grid for easy cleaning of the unit

### Tool free maintenance

Tool free maintenance allows easy cleaning and lamp replacement

### Independent certification

Independently tested and certified to European Standards

### Robust construction

All metal construction with white polyester finish for strength and durability.

## LIBERATOR

The Liberator is a range of insect control systems designed to offer the highest levels of insect control for all applications from takeaways and shops to food processing applications. The development of this range focused upon excellent design and quality with the primary emphasis placed upon achieving optimum performance and maximum reliability. All products are certified to meet Worldwide safety regulations and units are independently tested to ascertain efficiency levels. The Liberator unit is one of the quickest and easiest to service insect light traps on the market. The units are very economical to run and are available in either white or stainless steel and can be both wall mounted or ceiling suspended.

Additionally the units are available with jet proof options (IP45) for use in the toughest environments. The insects are attracted to the unit by 15W UVA lamps and become permanently trapped on a specially formulated glueboard or alternatively the insect comes into contact with the high voltage grid and is electrocuted and safely falls into the large catchment tray.
